Monterey Bay National Marine Sanctuary

# Sanctuary Ecologically Significant Area (SESA)

## SESA 13: Deep Sur Canyon

## Description

SESA 13 includes deep section of Sur Canyon and the surrounding soft bottom slope 2 habitat. Though it includes a wide depth range (1,205-1,932 m), it has low habitat richness (2 habitats) and habitat diversity (index =2.0). Very little research has occurred in this SESA; one benthic ROV survey. Water upwelled at Point Sur is likely to be advected through this SESA. The water over this SESA has relatively low primary productivity and has low likelihood of being a krill hot spot and does not overlap with any known foraging hotspots. This SESA is located within MBNMS, and research activities may require a permit (http://montereybay.noaa.gov/resourcepro/permit/permits\_need.html).

### **Resource Management Issues**

SESA 13 boundaries contain unique habitats and communities of the deepest parts of Sur Canyon that need to be better described. Little biological characterization has been done within SESA 13.

- Essential Fish Habitat (EFH) Conservation Area
- Commercial shipping lane
- Recreational fishing
- Leatherback sea turtle critical habitat

## **Science Needs & Research Questions**

Habitat Characterization of the Continental Slope

http://sanctuaries.noaa.gov/science/assessment/pdfs/mbnms\_characterization\_slope.pdf

- What are the distribution and abundance of organisms and habitats on the continental slope?
- · How do corals and chemosynthetic communities on the continental slope provide biogenic habitat for other species?

#### Human Health - Harmful Algal Blooms

http://sanctuaries.noaa.gov/science/assessment/pdfs/mbnms\_habs.pdf

How do HABs affect local species populations?

Impacts on Whales from Human Uses

http://sanctuaries.noaa.gov/science/assessment/pdfs/mbnms\_whale\_science.pdf

- What are the spatial and temporal patterns of habitat use of large whales throughout sanctuary waters (both inshore and offshore)?
- What are the environmental and prey characteristics that lead to foraging aggregations that may leave whales
  vulnerable to disturbance by recreational ocean users?

#### Socioeconomics and the Human Dimension

http://sanctuaries.noaa.gov/science/assessment/pdfs/mbnms\_socioeconomics.pdf

 How do we determine the overall impact of multiple human activities (some with negative and some with positive influence) on Sanctuary resources?

## **SESA Data Layers**

Table 2. The 13 SESAs of the MBNMS are comprised of a variety of biological and environmental characteristics that describe unique pelagic and benthic deep sea communities. Listed are a subset of these qualities which include habitat diversity (Shannon-Wiener diversity index); hard substrate area coverage (%); the most common type of habitat; the presence and abundances of corals and sponges, demersal fishes, and marine birds; and the area coverage (%) of upwelling zone within each SESA. Sources: Draft MBNMS report in preparation; SESAs Interactive Map, http://sanctuarymonitoring.org/maps/sesa/.
